Manganese in Drinking Water

A REPORT FOR TRI-COUNTY RURAL WATER SYSTEM

We serve more than 2,880 customers an average of 216,000 gallons of water per day. We get our water from surface water sources. The average manganese concentration in our drinking water is 0.02 mg/l. This concentration is below health advisory levels established by the United States EPA and considered safe to drink.

Additional information regarding manganese in drinking water can be found at the following website:
